ABSTRACT

The West Virginia education reform legislation of 1988 and 1990 mandated greater involvement of school personnel, parents, and community in site-based decision making. This paper examines the operations and activities of faculty senates, which are composed of all full-time educators in each school, for the years 1990-91, 1991-92, and 1992-93. A survey administered to delegates who attended the 1991, 1992, and 1993 West Virginia Education Association Delegate Assemblies yielded 176, 129, and 212 responses, respectively, an approximate 75 percent compliance rate. Respondents indicated increasing faculty involvement in school-based decision making; however, they expressed declining support for decisions and less satisfaction with senate operations within the 3-year period. They most frequently mentioned the need for training, role clarification, and greater support from the school and district administrations. Eight tables are included. (LMI)

New Orleans, LA

EA 026083

The West Virginia education reform legislation of 1988 and 1990 mandated greater involvement of school personnel, parents and community in site-based decision-making. This included establishment of school advisory councils, district professional staff development councils, school improvement councils, and establishment of faculty senates. This paper concentrates on the operations and activities of faculty senates in 1990-91, 1991-92, and 1992-93, with a comparison of these three years of experience on several dimensions: educational personnel involvement, areas in which faculty senates have made decisions, how meeting time has been spent, topics of senate meetings, satisfaction with meeting characteristics, how decisions are made in meetings, and effects of senate actions. Faculty senates were to be made up of all full-time professional educators in the school and were to be involved in making decisions and recommendations.

Perspectives

Many states and local school systems have initiated or are in the process of considering establishment of site-based decision-making approaches for increasing local personnel involvement and ownership of educational decisions. The West Virginia experience, over three years, provides a look at faculty perceptions of this strategy when mandated by state law.

Methods

A survey was designed to assess perceptions of how these faculty senates were organized, operated, and their effects in the first, second, and third years of existence. The survey focused on the following: respondent demographic characteristics, senate meeting participation, senate actions and decisions, time spent on various meeting activities, satisfaction with senate meetings, how senate decisions are made, and the effects of senate actions. The same survey was administered to similar sample groups in 1991, 1992, and 1993, so these three years could be compared.

Data Sources

The survey was administered to delegates attending the 1991, 1992, and 1993 West Virginia Education Association Delegate Assemblies. While it was voluntary for these delegates to complete the survey, more than 75% of the delegates did complete the survey. Since the survey was administered all three times to the same type of respondents, there is a sound basis for comparing the three years of experience. In addition, demographic characteristics and characteristics of the schools they represented were very similar between all three respondent groups. Table 1 presents results on demographic variables. There were 176 respondents for the 1991 survey, 129 for the 1992 survey, and 212 for the 1993 survey. A large majority (95%) of the respondents were teachers and the most of the remaining respondents were librarians or guidance counselors. More than 70% held masters' degrees. Eighty-five percent of the

respondents had more than ten years of professional experience and 64% had more than ten years of experience in their present school. Relative to types of schools, 42.6% of the respondents were from elementary schools, 20.6% were from middle or junior high schools, and 26.8% were from high schools. Most of the schools (54.7%) were from schools in rural settings, while 24.4% indicated they were from suburban schools and 21% indicated they were from urban schools. A majority (58.8%) of the respondents were from schools with enrollments of 200 to 600. The average faculty size was 35.5 and the average administrator size was 1.8.

Results

Meeting Characteristics

Table 2 presents results for characteristics of the faculty senate meetings. In 1991, 97%, in 1992, 98%, and in 1993, 100% of the respondents indicated senate meetings were held on a monthly basis. The average number of meetings held in 1990-91 was 7.4, in 1991-92 it was 8.8, and in 1992-93 there was an average of 8.9 meetings during the year, an average of 8.4 meetings per year. Respondents attended an average of 7.8 meetings per year. Clearly, the respondent group was present at almost all of the faculty senate meetings.

Release time was to be provided for senate meetings, a total of two hours per month during regular school day time. Ninety-seven percent of the respondents indicated that release time had been provided for faculty senate meetings. It was interesting to note that the percentage decreased over the three years, from 100% in 1990-91, 98% in 1991-92, and 94% in 1992-93.

Respondents indicated, in all three years, that more than 90% of the faculty participated in faculty senate meetings. Participants included most of the principals, assistant principals, teachers, guidance counselors, and itinerant teachers. There were much lower incidences of participation by support personnel and central office personnel.

Areas of Faculty Senate Decision-Making

Respondents were asked to indicate if their faculty senates had made decisions related to certain areas. Table 3 presents the results on these areas, by year and for the total respondent group. Three areas were clearly indicated as having been done by faculty senates of more than 90% of the respondents. These were: election of Faculty Senate chair, vice chair, and secretary (99.4%); expenditure of legislature-appropriated teacher instructional materials or equipment funds (96.1%); and nomination of teachers to School Improvement Council (93.6%). These percentages were consistent across the three years.

Three areas were cited next most often as having occurred by the respondents, all by more than 50% of the respondents. These were: establishment of recognition programs at the school (56.9%); nomination of teachers for recognition as outstanding teachers under state and local recognition programs (51.5%); and nomination of faculty members for election to the district staff development council (51.5%). Of these, two demonstrated more of a frequency of these happening in later years of faculty senate activity than in the first year. These were: establishment of recognition programs at the school and nomination of teachers for recognition as outstanding teachers under state and local recognition programs.

Two areas were indicated by about 30 to 40% of the respondents as having been conducted: recommendation to the principal regarding establishment of the master curriculum schedule for the next school year (42.4%) and establishment of procedures for soliciting, accepting, and expending grants, gifts, bequests, donations, or other funds made available to the Faculty Senate (30.9%).

Four areas had responses at about 20%. These were: nomination of other personnel at the school, including parents, for recognition under appropriate recognition programs (23.0%); recommendation to the principal regarding assignment scheduling of secretaries, clerks, aides, and paraprofessionals (21.1%); recommendation to the principal regarding selection of faculty to serve as mentors for beginning teachers under beginning teacher internships at the school (20.7%); and review of teacher evaluation procedures as conducted in school to ascertain whether such evaluations were conducted in accordance with the written system pursuant to state code (19.1%).

The areas were rated as having low occurrences of happening in faculty senate decision areas. They were: establishment of process for faculty members to interview new prospective professional educators and paraprofessional employees (12.2%) and establishment of a process for review/comment on sabbatical leave requests submitted by employees at the school (2.7%).

How Time Spent in Faculty Senate Meetings

One set of survey items asked respondents to indicate the percentage of faculty senate time spent in various activities. Table 4 presents results for these items. There was a wide variety types of activities, but clearly the highest percentage of time (39.3%) was spend discussing items on the agenda. Information provision accounted for about 14% of the time and decision-making accounted for about 12% of the time. Other activities took up lower percentages of time. These were: consensus reaching (6.6%), arguments and conflict resolution (6.3%), reporting actions since last meeting (6.2%), outlining/assigning group/individual tasks (4.9%), discussion unrelated to agenda items (4.3%), approving

minutes of last meeting (2.1%), agenda setting for this meeting (1.5%), and planning next meeting (1.2%).

Respondents were asked to check if other activities had taken place in faculty senate meetings. Table 5 presents results for these items. Of these activities, 75% or more of the respondents indicated that the activities of: information provision by administrators (97%), faculty member presentations (94%), future planning (91%), committee meetings (79%), "Gripe" sessions (87%), and curriculum development (77%), occurred occasionally or often. Less frequently cited were: grade level/department meetings (65%), program review/evaluation (73%), and faculty or school scheduling (69%). Clearly the least cited activity was student presentations/discussions, cited as happening occasionally or often by only 14% of the respondents.

Satisfaction with Meeting Characteristics

Respondents were asked to rate on a 1 (very dissatisfied) to 5 (very satisfied) point scale. Results for these items are presented in Table 6. Clearly, two characteristics were rated highest in terms of satisfaction. They were: frequency of meetings (M= 4.4 and 87% indicated somewhat or very satisfied) and opportunities for involvement in discussion (M= 4.2 and 80% indicated somewhat or very satisfied). Five characteristics were rated next highest, each with more than 65% of the respondents indicating somewhat or very satisfied. These were: meeting leadership (M= 3.9 and 69% indicated somewhat or very satisfied), meeting parliamentary procedures/operations (M= 3.8 and 69% indicated somewhat or very satisfied), communication in advance of meetings (M= 3.8 and 69% indicated somewhat or very satisfied), focus on school problems (M= 3.7 and 67% indicated somewhat or very satisfied), and agenda setting process (M=3.7 and 66% indicated somewhat or very satisfied).

Eight characteristics were rated as being somewhat or very satisfied by 53% to 61% of the respondents and with means of 3.4 to 3.6. These were: topics of discussion (M= 3.6 and 60% indicated somewhat or very satisfied), committee structure (M=3.6 and 60% indicated somewhat or very satisfied), focus on students (M= 3.6 and 61% indicated somewhat or very satisfied), participation by faculty in decision-making (M= 3.5 and 58% indicated somewhat or very satisfied), decision-making processes used (M= 3.5 and 57% indicated somewhat or very satisfied), decisions made/actions taken (M= 3.5 and 60% indicated somewhat or very satisfied), follow-through on decisions by faculty/staff (M= 3.5 and 58% indicated somewhat or very satisfied), and communications after meetings (M=3.4 and 53% indicated somewhat or very satisfied).

Four characteristics were clearly rated lower than those mentioned above. They were: participation by administrators in decision-making (M= 3.1 and 45% indicated somewhat or very

satisfied), follow-through on decisions by administrators ($M = 3.0$ and 40% indicated somewhat or very satisfied), participation by support staff in decision-making ($M = 2.8$ and 30% indicated somewhat or very satisfied), and, clearly the lowest rated characteristic in terms of respondent satisfaction, was participation by students in decision-making ($M = 2.4$ and only 16% indicated somewhat or very satisfied).

How Decisions are Made in Faculty Senate Meetings

A set of survey items asked respondents to indicate how decisions were made in faculty senate meetings, results of which are presented in Table 7. Clearly, the most frequently indicated method, cited as happening by 91% of the respondents, was majority vote. Thirty-three percent indicated consensus reaching until compromise decision was used, 21% indicated consensus reaching until unanimous decision was used, and 15% indicated consensus reaching until majority agree with dissenters able to suggest changes was used.

Other, less cited modes were: administration makes most decisions outside meeting (10.4%), small group of faculty with or without administration makes most decisions (8.2%), administration makes most decisions within meeting (3.4%), faculty senate chair makes most decisions (3.2%), faculty senate chair with administration makes most decisions (3.2%), and decisions are not made in faculty senate meetings (3.0%)

Support for and Effects of Faculty Senate Decisions

A series of items assessed perceptions of support for and effects of faculty senate decisions. Results for these items are presented in Table 8. Four of the items related to support for faculty senate decisions. Eighty percent indicated that decisions were supported by a majority of faculty, 51% indicated decisions were supported by school administration, and 17% indicated decisions were supported by central administration. Sixty-six percent of the respondents indicated they supported faculty senate decisions.

When asked how faculty senate decisions had resulted in changes, 46% of the respondents felt they had changed school policies and goals, 39% felt they had changed school leadership practices, and 31% felt they had changed instructional practices/curriculum, but only six percent indicated decisions had changed their teaching. In addition, 54% felt the decisions had affected students and 28% felt the decisions had affected community/parents.

Educational Importance

Site-based decision-making has been touted as a way of increasing faculty involvement and ownership in dealing with local school decisions. In the West Virginia case, this has been mandated by the state legislature. Based on these data, it seems that there has been support and increased involvement of faculty in decision-making. However, it seems that support for decisions and satisfaction with senate operations has declined somewhat from the first year to second and third years of the faculty senate operation. There is further need to assess faculty expectations and how these types of programs meet those expectations and determine contextual factors which relate to the success of implementing such programs. Perhaps it should not be assumed that faculty are eager for such mandated programs or are prepared to utilize them in the most appropriate and useful manner. A few of the most frequently made comments were the need for training, the need for role clarification, and greater support from school and district administration.

Additional data analysis is being conducted to compare survey results by school type (elementary, middle/junior high, and high school) and by school setting (rural, suburban, and urban). Results of this analysis may be obtained by writing either of the authors.
